THE TRUTH ABOUT ALCOHOL AND THE WAR

A Reply from the Distillers of the United Kingdom to the misleading, inaccurate and altogether untrustworthy statistics of the Strength of Britain Movement who, under the cloak of War, state that the manufacture of Spirits at the present moment is hurtful and injurious to the Nation, and are endeavouring to force the Government to adopt total prohibition. The *true* position about Alcohol and the War is here proclaimed, and the great work which has been accomplished by the Distillers is placed on record. This is done in the interests of justice and fair play as well as for the protection of a certain section of the public against lending an ear and according financial support to the misinformed movement referred to.

DOUBTFUL MORALITY OF TACTICS EMPLOYED by STRENGTH of BRITAIN MOVEMENT

THE Strength of Britain Movement have utilized the War as a means of exploiting their own selfish interests. Wild statements and exaggerations incapable of being tested or proved by the public have been relied upon to gain the sympathetic ear of the Nation, a policy which no honest agitation need adopt to attain its ends.

Figures which have been given must be merely guess-work. In some cases they are supposed to cover a period of twelve months, in others twenty months and sometimes the whole period of the War.

When the history of this War comes to be written it may have to be recorded that the Distillers of the United Kingdom served their country in a manner which was not only patriotic but essential to victory. Here it may be added that practically all those who distil and sell good spirits have always been on the side of "preparedness," and enough money has been contributed by them to pay for the Navy and Army in normal times. From this it must not be inferred that Great Britain is a drinking nation, for it is the moderate drinker that is the backbone of the Trade—and the Nation.

IMPORTANCE OF YEAST AND CATTLE FOODS

THE work of Distillers does not end with the production of alcohol. Indeed the Yeast Industry now figures largely in affairs of national importance. In thirty years the Distillers of this Country have put the home Yeast Industry on a firm foundation and have been successful in diverting fully two-thirds of the trade in yeast from foreign countries—more especially Germany—to our own shores. At times, during latter days, the entire British Baking Trade has been dependent upon the British Distillers for its supply of yeast.

After alcohol and yeast have claimed their share of the properties of which grain is composed, there is left a residue, particularly rich in albuminoids and oil, which forms an excellent cattle food. The quantity of draft and dred recovered from the grain amounts to about 360,000 tons per annum and may be considered value for at least £40,000. We leave it to Farmers to say what substitute they would find so suitable for the purpose for which it is employed.

FACTS WORTHY OF REFLECTION

IT requires little reflection on the part of those who know the *true* position of affairs to realize that without the Distillers Great Britain would have been in a much less favourable position than she is to-day.

As we have seen, the Great Distilleries are essential for the production of munitions; they are essential to the Yeast Industry of the Country, and they are essential for a particularly rich and valuable cattle food. In the past the revenue from the sale of spirits has maintained the Navy as well as the Army.

To-day both the Army and the Navy are strengthened by the patriotic attitude of the Trade, who in their thousands joined the Forces at the outbreak of war. The Trade yield to none in their patriotism, and it is intolerable that such reckless and unscrupulous attempts to destroy their business should be made in the guise of a wartime necessity, when the simple truth is that not only are they among the most important revenue producers, but that the commodity they handle is an indispensable Munition of War.

ALCOHOL NOT A FOOD WASTER BUT AN INDISPENSABLE MUNITION OF WAR.

IN one of their advertisements the Strength of Britain Movement, with characteristic exaggeration, claims that alcohol is responsible for the high cost of living. They say: "Since the War alcohol has consumed 3,000,000 tons of food, with sugar enough to last the nation for 80 days." As we said previously, we do not know the source of these figures; but the obvious inference intended to be drawn is that if the distilleries were closed down 1,500,000 tons of food would be saved to the nation every year.

This statement will not bear examination. The facts, so far as the distilling industry is concerned, may be stated very shortly. Prior to War the quantity of materials annually used by the Distilleries was 500,000 tons. Of this 70,000 tons were required to produce alcohol for use in Arts and Manufactures and in the Methylating Trade. At present the quantity of raw materials used is 434,000 tons per annum. Of this, no less than 270,000 tons are required by the Government for the production of Munitions and for other industrial purposes. This leaves only 160,000 tons for the production of potable spirit. Not only so, but within the next four weeks the entire output of every Patent Still Distillery in the Country will be required for Munition and Industrial purposes. All that will then be left for potable purposes will be the output of the Pot Still Distilleries, which annually absorb no more than 70,000 tons of Raw Materials.

Two of the largest Patent Still Distilleries are already under Government control and employed on the production of Munitions of War other than strong spirit. Four more Patent Still Distilleries are in process of being converted for the same purpose. This means that the remaining Distilleries will be taxed to the utmost to produce the rapidly growing quantities of alcohol required by the Government and other industrial users. These figures demonstrate the absurdity of the allegations that the consumption of spirits entails the waste of huge quantities of materials which would otherwise be available as food and is responsible for the prevailing high prices. Such statements are misleading and cannot be allowed to pass unchallenged.

RECKLESS AND MISLEADING FIGURES CONTROVERTED.

THOSE untrue statements regarding the effect of the production and consumption of alcohol upon the nation's food supply are typical of the many exaggerations of the Strength of Britain Movement. Here is another of their statements: "Although tens of thousands of miners have enlisted, and there is not sufficient coal being mined for the needs of the nation, 3,000,000 tons of coal have been used up by alcohol since the War began." Nothing is said, it will be observed, of the very large proportion of the total production of alcohol used by the Government. It will be plain to every unprejudiced reader that the Strength of Britain Movement is concerned not so much with stating the truth as with securing signatures and monetary subscriptions by means of sensational statements.

Continuing, those responsible for the advertisements state that 50,000,000 cubic feet of valuable shipping space has been occupied for the conveyance of raw material for the making of alcohol. It is difficult to check statements such as these, but even if the figures given were correct it is no better than a half truth for the reasons given above. The unfortunate thing is that mere assertion may be mistaken for convincing argument by that vast public which is necessarily unfamiliar with the facts and figures of a great industry.

There are other statements made by the so-called Strength of Britain Movement which might be equally readily controverted. Meantime, enough has perhaps been said to show that the Movement, even if disinterested, has not the solid foundation of righteousness which alone justifies support.
